

 *Chlor perfect*

Instructions for installation and use
English

EN

Congratulations, you have just acquired a Zodiac Chlor Perfect which will allow you to disinfect your pool water without constraints.

Chlor perfect measures the water's ORP (OxydoReduction Potential = water's disinfection capacity) using a ORP sensor placed on the filtering circuit which permanently analyses the pool water.

Depending on ORP reading, Chlor Perfect will inject the quantity of product needed (liquid chlorine) to maintain the balance of the pool water using its dosing pump.

The  symbol indicates important information that it is imperative to take into consideration in order to avoid all risks of harm to persons or damage to the appliance.

The  symbol indicates useful information.

1 Description of your Chlor Perfect

1.1 Parts identification

List of the items present in the packaging and needed to install your Chlor Perfect:

- ① Chlor Perfect Regulator
- ② Suction cane with 2 m PVC tube and 3 m cable
- ③ Wall mounting bracket
- ④ Wall mounting kit (2 plugs & 2 screws)
- ⑤ ORP sensor model Z35R1P-17 with 5 m shielded cable
- ⑥ Sensor holder model PSS3 (1/2")
- ⑦ FPM lipped injection valve (3/8")
- ⑧ 1/2" - 3/8" adapter for injection valve
- ⑨ - ⑩ Fixing collars to fit the injection valve and sensor holder (DN 50 mm)
- ⑪ Buffer solution 465 mV
- ⑫ Polyethylene injection pipe (5 m)

1.2 The control panel

- ① LCD screen one 16 character line, black display with orange back lighting.
Left side: coupling zone (alarms) / Right side: ORP value display
- ② Peristaltic pump
- ③ Connection for the polyethylene injection pipe.
- ④ Connection between the PVC suction tube and the suction cane.
- ⑤ Cable gland: the direct coupling cable to the filtering system (220-240 V AC only when the filtering is operational).
- ⑥ Cable gland: cable connecting the control box to the level sensor in the suction cane.
- ⑦ Cable gland: cable for mains power supply 220-240 V AC.
- ⑧ ORP sensor BNC connector: the sensor cable is connected to the regulator box using this connector.
- ⑨ Main switch: used to power on the regulator.
- ⑩ Navigation key "▼": navigation through the "Parameter" menu settings.
- ⑪ "SET/Esc" key: key used to exit the "Parameter" menu. Also used to view the value for the pH set point when pressed continuously.
- ⑫ Navigation key "▲": navigation through the "Parameter" menu settings.
- ⑬ "CAL/Enter" key: key to activate the sensor calibration mode (The key must be held down for 5 seconds). Also used to validate the selections from the "Parameter" menu.

L'appui simultané sur les boutons "▲" et "▼" pendant 5 secondes active le mode "Boost" (super-chloration, voir paragraphe 3.3).

2.1 Recommendations

WARNING: CHLOR PERFECT MUST BE INSTALLED BY AN EXPERIENCED POOL PROFESSIONAL.

➤ **BEFORE CARRYING OUT ANY INTERVENTIONS INSIDE THE CHLOR PERFECT REGULATOR BOX, DISCONNECT IT FROM THE POWER SUPPLIES.**

➤ Before starting to install the Chlor Perfect regulator, check that all the components needed to install are present and read this instruction manual carefully.

➤ If the instructions contained in the manual are not respected, harm to persons and/or damage to the appliance may occur.

➤ During the installation phase of the Chlor Perfect, check the following:

- that the voltage of the power supply corresponds to the voltage indicated on the side of the appliance
- the electrical installation complies with standard NF C15-100 (or equivalent for other European countries)
- that the injection point pressure is lower than 1.5 bar
- that the pump's protection cover is correctly fitted
- that the suction tube is immersed in the disinfectant product container with the suction cane and is connected to the peristaltic pump (left side).
- that the injection tube is connected on one side to the peristaltic pump (right side) and on the other side to the pool return pipe via the injection valve.

➤ Use liquid chlorine specific for use in a private pool. Zodiac Pool Care Europe cannot be held liable for the use of an inappropriate product.

➤ The ORP sensor is fragile, it must be handled with care.

2.2 Technical data

Size (L x w x h)	240 x 200 x 90 mm
Weight (appliance, sensor, cane and pipes)	1.7 kg
Power supply 50 Hz	220-240 V AC / 50 Hz
Consumption	18 W
Pump flow	5 L/h
Maximum counter pressure	1.5 bar
ORP control range	10 - 1000 mV
Appliance accuracy	+/- 10 mV
Sensor calibration	Single point semi automatic

2.3 Reference installation diagram

Chlor Perfect is installed on the filtering circuit:

THE LINEAR DISTANCE BETWEEN THE SENSOR AND THE INJECTION POINT MUST NOT BE LESS THAN 60 CM.

The injection point must be the last element on the return before the pool.

The electric power supply cables and ORP cables must pass through a different location than the big pump supply and other electric cables in order to avoid disruptive currents. The maximum pressure in the pipes must not be greater than 1.5 Bar.

In order to extend the life of the peristaltic tube, the pressure should not exceed 1 bar. On installations having a heating system or any other equipment, the equipment should be located after the ORP sensor and before the liquid chlorine injection point.

OPTION (NOT PROVIDED IN THE PACKAGING): POD KIT

The "POD kit" is an accessory that is used to group together the measurement sensors in the same place when using a Chlor Perfect combined with a Zodiac pH Perfect (or other regulation using a 12 mm Ø sensor).

The "POD kit" includes a multi-diameter fixing collar (DN50 mm or DN63 mm) and a measurement chamber designed to obtain more reliable readings (+ assembly accessories).

The "POD kit" is available from your reseller.

2.4 Box fixture and electric connection

Install the Chlor Perfect regulator using the supplied fixing kit on a rigid support (a vertical wall) in an easy to access location.

The electric connection of the Chlor Perfect must be carried out by an experienced pool professional.

"standard" Chlor Perfect electric connection:

2.5 Installing the sensor and the injection point

The sensor must be placed vertically, or even at a max of 45°, but always above the rigid pipe. It must NEVER be placed horizontally or below the rigid pipe.

Correct positions ✓

Incorrect positions ✗

Drill a hole of a diameter between 16 and 22 mm included on the pipe at the locations selected for the ORP sensor and the injection point (see diagram in paragraph 2.3). Next fit the fixing collars aligning them opposite the previously drilled holes.

Use Teflon® tape to make sure the threads on the sensor holder, the injection valve and its adapter are watertight.

Remark: Refer to paragraph 4.1 to change the display language.

3.1 Calibration procedure

Calibration of the sensor must be carried out when installing the Chlor Perfect and ideally every 2 months to make sure your appliance continues to operate in the best conditions.

- Calibration must be carried out every time you commission your pool at the start of the season.
- The calibration procedure is carried out when the filtering system is not running thanks to its double supply (the appliance remains powered on). Stop the filtering system and close the valves so that the ORP sensor holder is isolated from water flow before starting.

Procedure:

1. Loosen the sensor holder and delicately remove the sensor from the duct

2. Rinse the sensor in clean water and shake off the droplets of water (do not use a cloth).

3. Plunge the sensor into the bottle of "mV465" buffer solution.

4. Keep the "CAL/Enter" key pressed down for 5 seconds until "Calibration" is displayed on the LCD screen (figure 4a).
Press the "CAL/Enter" key again as shown on the screen to start calibration on 465 mV (figure 4b).
An automatic progress bar appears during 30 seconds (figure 4c).
5. After 30 seconds the appliance displays the accuracy of the sensor readings as a percentage.
Example: 100% for a new sensor. If < 25%, see chapter 8.
To finish the calibration, press the "CAL:Enter" key. The appliance will return to measurement mode.

> Once calibration has been carried out, the Chlor Perfect is ready to regulate your pool disinfection. If the need for chlorine is very high (< 550 mV) it may be necessary to pause the overdose safety (OFA) for 24 or 48 hours (see paragraph 4.4).

Priming 740mV

> The Chlor Perfect peristaltic pump is self priming.
However, it is possible to run it manually by keeping the "▲" key pressed down.

3.2 Chlor Perfect injection rule

Exclusive Zodiac proportional cyclic dosing

Chlor Perfect is designed to automatically maintain a level of chlorine making it possible to maintain a good disinfection of the pool. It permanently measures the water's disinfection potential (also known as "ORP potential") and injects liquid chlorine depending on the needs. The ORP potential is measured in millivolts (mV).

In order to reach the set point in the best conditions, your Chlor Perfect automatically detects the difference between the ORP values measured in the pool and the set point value (default value = 740 mV, see paragraph 4.3 to modify it).

Chlor Perfect's proportional injection is cyclic and the cycle duration is 10 minutes. What changes the doses are the automatic balancing of injection times and pauses.

The proportionality automatically adjusts, the balancing between the different doses is made using 70 mV steps.

→ Example of 4 cycles with a set point at 740 mV:

- ☞ **ORP ≥ 670 mV** : 20% injection (2') & 80% pause (8')
- ☞ **ORP ≥ 600 mV** : 50% injection (5') & 50% pause (5')
- ☞ **ORP ≥ 530 mV** : 75% injection (7'30") & 25% pause (2'30")
- ☞ **ORP < 530 mV** : 100% injection (10', continuous)

3.3 Boost Mode

Chlor Perfect is equipped with an exclusive function that makes it possible to manually and rapidly increase the level of free chlorine in the pool (stormy weather, high number of bathers...). The duration of the Boost mode is set to 10 minutes by default (see paragraph 4.7 to change the duration).

When the Chlor Perfect is switched on, press the "▲" and "▼" keys simultaneously for 5 seconds to activate the Boost mode. "Boost" followed by the number of minutes remaining will be displayed on the left of the LCD screen.

4.1 Language

The default language on the Chlor Perfect is French.

You have a choice of 6 languages for the LCD display: French, English, German, Spanish, Italian and Dutch.

To change the language, after having entered the "Parameter" menu (see paragraph 4.2), activate the selection list by pressing the "CAL/Enter" key (a small arrow appears on the right of the screen and the language blinks) then select the language using the "▲" and "▼" navigation keys.

Validate the choice by pressing the "CAL/Enter" key.

4.2 "Parameter" menu default settings

Chlor Perfect is pre-set in the factory with the following parameter values (adapted to most situations):

- Language: **French**
- ORP set point: **740 mV**
- "OFA" overdosage safety: **4 hours**
- Calibration: **activated** (465 mV)
- Filter operation detection: **activated**
- Boost mode duration: **10 minutes**

→ To access the "Parameter" menu the appliance must be switched on. Press the "CAL/Enter" and "SET/Esc" keys simultaneously for 5 seconds until the LCD screen displays "Parameter".

This "Parameter" menu gives access to the following settings:

- **Language**
- **Set point**
- **Triggering time for the "OFA" overdose safety**
- **Calibration activation**
- **Filtering operation detection**
- **Boost mode duration**

→ To exit the "Parameter" menu, press the "SET/Esc" key and select "Save" or "No Save" using the "▲" and "▼" navigation keys to save or cancel the new settings.

Validate the choice by pressing the "CAL/Enter" key.

4.3 Set point

The default set point for Chlor Perfect is 740 mV.

This value corresponds to optimal chlorination for most private pools.

To change it, once you have entered the "Parameter" menu, activate the selection list by pressing the "CAL/Enter" key (the ORP value blinks), then select the desired value using the "▲" and "▼" navigation keys.

The adjustment is by segments (hysteresis) of 10 mV.

Validate the choice by pressing the "CAL/Enter" key.

It is also possible to directly access the set point setting by pressing the "SET/Esc" key for a long time (keep it pressed down while changing the value using the "▲" and "▼" keys).

4.4. "OFA" overdose safety

Your Chlor Perfect is fitted with a safety mechanism to avoid all risks of liquid chlorine overdoses if a problem occurs with the ORP sensor for example.

The purpose of this safety called "OFA" (Over Feed Alarm) is to pause the appliance if it has not reached the set point after the time setting which has a default value of 4 hours.

The "OFA" dosage safety operates in two steps:

OFA Alarm 700mV

#1: "OFA alarm" flashes on the LCD screen after 70% of the OFA programmed time without having reached the set point. The appliance is, however, still operational.

OFA Stop 700mV

#2: "OFA Stop" is displayed on the LCD screen when 100% of the programmed time for the OFA has passed (4 hours for the factory setting). The appliance is then secure.

→ To cancel this safety and restart your Chlor Perfect, press the "CAL/Enter" key (valid for both steps of the OFA alarm).

Make sure that the ORP sensor is in good condition and, if necessary, clean it and/or calibrate it.

The overdose safety has a default setting of 4 hours. It is possible to adjust it from "Off" (deactivated) to "6 hours" in one hour steps.

A relatively high value is recommended in order to avoid any unexpected and/or unjustified triggering.

To adjust the OFA, once you have entered the "Parameter" menu, activate the selection list by pressing the "CAL/Enter" key (the value in hours blinks), then select the desired value using the "▲" and "▼" navigation keys. Validate the choice by pressing the "CAL/Enter" key.

→ Special OFA functions

In order to prevent "false alarms" following the installation of the Chlor perfect (if the pool ORP potential is low and therefore the need for chlorine high), the OFA can be temporarily deactivated for 24 or 48 hours:

OFA 24h 700mV

→ Press "▲" and "▼" & "CAL/Enter": OFA is deactivated for 24 hours (reactivated automatically).

OFA 48h 700mV

→ Press "▲" and "▼" & "SET/Esc": OFA is deactivated for 48 hours (reactivated automatically).

4.5 Calibration activation

The calibration of your Chlor Perfect is carried out by default in a single step using a 465 mV buffer solution.

However, it is possible to remove this function (we advise strongly against this, except in the case of pools with an exclusive maintenance contract).

To activate or deactivate the calibration, after having entered the "Parameter" menu, activate the selection list by pressing the "CAL/Enter" key (a small arrow appears on the right of the screen and the item blinks) then select "On" or "Off" using the "▲" and "▼" navigation keys.

Validate the choice by pressing the "CAL/Enter" key.

4.6 Filtering operation detection

Your Chlor Perfect is fitted by default with a double electric power supply making it possible to keep the appliance switched on to carry out the ORP sensor calibration when the filtering is not operational. This function can however, be deactivated in the case of a different electrical connection (only carried out by a professional).

The Chlor Perfect will no longer take into consideration the status of the filtering and may inject liquid chlorine when there is no flow in the piping. This deactivation is only valid if the mains power cable is coupled to the filtering.

To change this function, after having entered the "Parameter" menu, activate the selection list by pressing the "CAL/Enter" key (a small arrow appears on the right of the screen and the filtering detection status blinks) then select "On" or "Off" using the "▲" and "▼" navigation keys.

Validate the choice by pressing the "CAL/Enter" key.

4.7 Boost Mode

The Chlor Perfect Boost mode is set by default at 10 minutes (corresponds to 830 injected mL), this is the ideal compromise to increase the chlorine level quickly in a pool from 50 to 100 m³.

It is possible to set the duration of the Boost mode from "Off" to "15" minutes by one minute steps.

Do not set the Boost mode to a high time if the pool volume is low (<50³).

To change the length of the Boost mode, after having entered the "Parameter" menu, activate the selection list by pressing the "CAL/Enter" key (a small arrow appears on the right of the screen and the Boost mode blinks) then select the duration using the "▲" and "▼" navigation keys. Validate the choice by pressing the "CAL/Enter" key.

4.8 Reinitialising the appliance

In case of misuse, it's possible to restore the factory Chlor Perfect operation settings.

Procedure to reinitialise the Chlor Perfect:

- Turn off the appliance.
- Power it back on while simultaneously pressing the 2 navigation keys "▲" and "▼" (keep the keys pressed down until the message appears on the screen).
- Select "Yes" or "No" using the navigation keys and then validate using the "CAL/Enter" key.
- All the factory settings will be restored.

Init.Default Yes

5.1. Changing the peristaltic tube

1. Remove the protection cover by gently pulling it towards you.

2. Place the roller holder at "10:20" by turning it clockwise.

3. Completely remove the left hand connection keeping it stretched towards the outside, then turn the bearing holder clockwise in order to free the tube up to the right hand connection.

4. Make sure the bearing holder is placed at "10:20". Fit the left connection into its housing, then pass the tube under the bearing holder guide. Turn the bearing holder clockwise while accompanying the tube in the pump head up to the right hand connection.

5. Replace the protection cover (place the bump in the centring hole).

5.2. Wintering the Chlor Perfect

→ During wintering it is recommended to let the appliance pump clean water in order to rinse the peristaltic tube using the priming function by pressing the "▲" key (see paragraph 3.1). Then place the bearing holder at "6 o'clock".

→ Remove the ORP sensor from the sensor holder. Place it in its original container or in a goblet filled with tap water. If necessary, close the sensor holder.

Never let the tip of the sensor dry!

6

Water quality

Even if the Chlor Perfect is an automatic regulation system, it is essential to regularly check the different water quality parameter (measurements to be carried out before installation and then regularly during the bathing season).

Zodiac Pool Care Europe cannot be held liable for the failure to respect these rules.

To fit your pool with a global automatic water treatment system, we recommend that you use a Zodiac pH Perfect regulation combined with your Chlor Perfect in order to continuously check the water's pH.

	pH	Free Chlorine mg/L or ppm	TA (alkalinity or buffer effect) °f (ppm)	CH (level of calcium carbonate) °f (ppm)	Cyanuric acid (stabiliser) mg/L or ppm	Metals (Cu, Fe, Mn...) mg/L or ppm
Recommended values	7.2 - 7.4	0.5 - 2.0	8 - 15 (80 - 150)	10 - 30 (100 - 300)	< 30	≈ 0
To increase	Add pH + or use a pH Perfect regulation	Increase the ORP set point or use the Boost mode	Add alkaline corrector ("TA +")	Add calcium chloride	Add cyanuric acid (only if necessary)	/
To reduce	Add pH - or use a pH Perfect regulation	Reduce the ORP set point	Add diluted hydrochloric acid	Add a scale fixer or carry out decarbonation	Partially empty the pool and refill it again	Add a metal fixer
Test frequency (in the season)	Weekly	Weekly	Monthly	Monthly	Quarterly	Quarterly

EN

7

Alarms

Alarm	Cause(s)	Solutions
Level 740mV	Liquid chlorine container empty	→ Replace the container → Check the correct operation of the floater on the suction cane
OFA Alarm 700mV	OFA first step activated (time > 70 %)	→ Check the level of free chlorine → Press "CAL/Enter to stop the alarm
OFA Stop 700mV	OFA second step activated (time = 100%)	→ Check the level of free chlorine → Press "CAL/Enter to stop the alarm
Flow 740 mV	Filtration stopped	→ Start filtering → Check the connections
465 Error	Buffer solution used ORP sensor defective	→ Replace the buffer solution → Clean and/or replace the sensor
Error Parameter	Parameter error(s)	→ Press "CAL/Enter to cancel the fault → Replace the electronic card

Problems	Causes	Solutions
The Chlor Perfect displays a value close to 0 mV	Problem on the sensor cable and/or the BNC connector	→ Check that the connection between the ORP sensor and the Chlor Perfect is not short circuited (between the central core of the cable and the outer shielding) → Check that there is no humidity and/or condensation at the BNC connector level
The appliance displays a constantly fluctuating value	Sensor cable damaged	→ Check the cable and/or the BNC connector
	Sensor cable too close to an electric cable causing disturbances	→ Place the sensor cable elsewhere (removed from any electromagnetic disturbances).
Calibration impossible (error message)	Buffer solution defective	→ Check that the solution used is 465 mV → Use a new 465 mV buffer solution and start the calibration again
or	The sensor is dirty or defective	→ Check the end of the sensor → Check the porosity of the sensor → As a final resort, clean the sensor by leaving its extremity in a 10% solution of hydrochloric acid
Reliability of the ORP sensor < 25%		→ Replace the ORP sensor
The ORP sensor is slow to respond	The ORP sensor is electrostatically charged	→ During calibration the ORP sensor MUST NOT be wiped with a cloth or paper; shake it gently after rinsing.
The level of free chlorine is too low (murky water)	The water balance is incorrect (high pH...)	→ Check and correct the water balance parameters (see chapter 6) → Use the Boost mode is necessary
	ORP set point is too low	→ Make sure the ORP set point is greater than 700 mV
	Daily filtering time too low	→ The daily filtering time must be of at least 12 hours/day during the season
The free chlorine level is too high	The water balance is incorrect (low pH...)	→ Check and correct the water balance parameters (see chapter 6)
	ORP set point is too high	→ Make sure the ORP set point is close to 740 mV → If necessary switch off the Chlor perfect

Principle

Except for terms to the contrary, we contractually guarantee the correct operation of our new products. We guarantee that our products correspond to their technical specificities and are free from material or manufacturing defects.

In all events, this warranty is limited, at our discretion, either to the repair or to the exchange by a new or reconditioned product, or the refund of Products we acknowledge to be defective. The transport costs for the Product that is repaired or replaced and delivered to our customer is at our expense, excluding labour costs, travel and/or accommodation paid for by us during the repairs outside of Metropolitan France and to the exclusion of the payment of any compensation.

Any product returns must be decided and accepted by us beforehand. No return at the sole initiative of the Customer will be accepted.

More especially, the warranty on spare parts can only be activated after analysis and expertise by our company of the returned parts and the decision to replace these parts.

In all events, the legal warranty of the seller continues to apply.

For the warranty to be active, our Customer and End user undertake to respect the water balance parameters according to the following criteria:

- pH: $6.8 < \text{pH} < 7.6$
- free chlorine: $< 3.0 \text{ mg/L}$
- stabiliser (if used) : $< 75 \text{ mg/L}$
- total dissolved metals (iron, manganese, copper, zinc...) : $< 0.1 \text{ mg/L}$

Remark: The use of water from a borehole or well is prohibited.

General limitations

This guarantee does not apply to visible defects, i.e. visual defects visible but not declared by the Customer at product delivery.

Are also excluded the defects or deteriorations caused by the inappropriate nature of the product to the end user's needs, by normal wear, through negligence, through an incorrect use or an incorrect installation or a use that is not compliant with the recommendations in this manual, by insufficient maintenance and/or accidental mishandling, by bad storage and/or by studies, instructions and/or specifications issued by our Customer.

All modifications made to the Products by the Customer, by the User or by a third party automatically end the entire guarantee. The same applies to the case where original parts have been replaced by parts not sold by us.

Our Customer shall make sure of the compatibility of our products with the other pool equipment by questioning the different manufacturers; as well as the installation and commissioning rules to be complied with for the correct operation of the entire system.

In the case that the product is returned to our workshop, the transportation costs will be at the expense of the final user, excepting those mentioned in paragraph 1.

The immobilisation and loss of use of an appliance caused by the necessity to repair cannot give rise to compensation.

This guarantee will also be excluded in the event of failure to pay or overdue payment of the Product by the Customer.

Length

The date on which the contractual warranty begins is the date on the sales invoice of the new Product from our Customer to the end User.

The invoice is required and is the condition of any work under guarantee.

Failure to do this will result in the Customer supporting all the damaging consequences for our company alone for all claims from Users using the contractual guarantee after its expiry date.

The reparations and/or replacements made under this guarantee will not have the effect of extending its duration.

Special terms for Automatic Regulation Line products

We guarantee that all products correspond to their technical specifications and are free from material or manufacturing defects, and that they correspond to technical evolution and state of the art when placed on the market.

Later modifications made to our products (improvements or modifications following the product's technological progress) cannot be the cause of an intervention by our company.

Are excluded from the guarantee:

- The normal wear of parts such as the sensor, the peristaltic tube, the buffer solution(s) or the check valve.
- Electrical damage caused by lightning or an incorrect electric connection.
- Damage due to shocks, incorrect use or faulty maintenance.

The warranty is for 2 years starting on the invoice date for the invoice for the sale of the new product by our Customer to the end user for the entire product line.

All requests under guarantee must be sent to your Retailer. We recommend that you keep your purchase invoice carefully if you require assistance for your product.

10

On-line registration

Register your product on our website: www.zodiac-poolcare.com

→ You will be the first to be informed of new Zodiac products and special offers.

→ You can help us to constantly improve our product quality.

Recycling

Your appliance is at the end of its life span. You wish to dispose of it or to replace it. Do not place it in the trash nor in your area's selective sorting containers.

This symbol on a new appliance means that the equipment must not be thrown away; it will be selectively collected for the purpose of reuse, recycling or creating value. If it contains substances that are potentially harmful to the environment, they will be eliminated or neutralised.

Ask your reseller about how to recycle your appliance and the bodies that can do so.
